

Workflow Audit

1. Workflow Audit

Recurring Task	Classification	Rationale
Attend college classes and labs	Just Me	I need to attend classes, participate, and learn through my own effort.
Study semester subjects	Collaborate with AI	AI helps explain concepts, but I must understand and practice them myself.
Complete programming assignments	Collaborate with AI	AI helps debug and explain code, but I write and test the final solution.
Build AI and Full Stack projects	Collaborate with AI	AI assists with planning, coding, and debugging while I make technical decisions.
Debug Python and JavaScript code	Collaborate with AI	AI suggests possible fixes, but I verify every solution through testing.
Write GitHub README files and documentation	Delegate to AI with Review	AI creates a draft quickly, and I review it for technical accuracy.
Learn new technologies (FastAPI, PostgreSQL, AI tools)	Collaborate with AI	AI acts as a tutor, but hands-on practice is necessary.
Plan my weekly study schedule	Fully Automate	AI can generate a balanced study plan based on my priorities.
Prepare presentation slides	Delegate to AI with Review	AI organizes content efficiently, and I verify the information.
Practice interview and aptitude questions	Collaborate with AI	AI can simulate interviews and provide feedback, but I improve through practice.
Take semester examinations	Just Me	Exams must reflect my own understanding and performance.
Make final project submission decisions	Just Me	I am responsible for ensuring my work is accurate, ethical, and complete.

2. AI Toolkit Setup

Tool	Status	Evidence
ChatGPT	Configured	Account available
Claude	Configured	Claude Project created
Anthropic Academy	Enrolled	AI Fluency: Framework & Foundations enrolled
AI Fluency Course	First Module Completed	Screenshot attached

3. Claude Project

Item	Details
Project Name	AI Fluency Internship
Who I Am	Third-year Computer Science Engineering student interested in AI, Full Stack Development, and Backend Development.
Tone Preference	Clear, simple, and step-by-step explanations with practical examples.
Current Goals	Improve AI fluency, build portfolio projects, prepare for internships, and strengthen programming skills.

4. Three Target Tasks

Target Task	What "Done Well" Means
Learning Programming Concepts	I understand the concept, solve at least five practice problems, and can explain it in my own words.
Building AI & Full Stack Projects	Features are implemented, tested, pushed to GitHub, and documented without major bugs.
Debugging Code	The bug is identified, fixed, tested successfully, and I understand why it occurred.

5. Evidence

Anthropic Academy – AI Fluency: Framework & Foundations (First Module Completed)
